Event Overview

The Congress is organized by IARMM together with Heidelberg University and the other German organization. It aims to improve and promote the science and technology of better safety in both risk and crisis management in health care. The congress covers a wide range of topics such as patient safety, medication safety, medical device safety, infectious disease outbreak, and the other related subjects.

German scientific culture of risk has the longest history of over hundred years in the world and has absolutely active movements in risk science and technology which generated the important key concepts, such as philosophy of risk, risk communication, risk management, etc.

We are sure that the Congress will assist the world wide exchange of knowledge and skill in this specialist area with excellent German risk scientists. Let's all join together at our Heidelberg Congress to meet and share information with your colleagues.

Each speaker is requested to preinstall SKYPE free software program on their PC with internet, and preset web-microphone and web-camera.

(Note)

Each user of the above live systems should register and prepay the conference registration fee. The fee of the remote participant is same as that of the conference hall participant.

The detail manual of PC operation for the live streaming broadcast is provided after your registration.

## Introduction

“Union of Risk Management for Preventive Medicine (URMPM)”, former name of “International Association of Risk Management in Medicine: IARMM”, was founded as an international medical society for health and safety in Switzerland on April, 2002. Its headquarters has been located in Tokyo, Japan since 2005. This academic medical society held the 1st World Congress of Clinical Safety (1WCCS) in University of London, September 2012 with delegates from over 30 countries. The main purpose of this world congress is to improve and promote a science of risk and emergency management for patient safety, medication safety, medical device safety and infectious disease control together around the world. The 2nd WCCS will be held in Heidelberg, Germany in September 2013 under a keyword of “Risk in Clinical Care”.

While by the end of the 20th century, new topics such as clinic gene technology had been added to medicine’s paramount concern with health, it should not be forgotten that health and safety remain integral to human well being. In the 21st century, risk and crisis management are widely recognized as one of fundamental aspects of human existence.

Germany is a well-recognized country of world top level in risk science and technologies with over hundred year history. Germany has generated many basic tools, such as risk science, philosophy of risk, risk communication, risk management, etc. Therefore, it is clear that the German scientific culture in risk science and technology can also give great advances in “Risk in Clinical Care” in an aspect of risk science. On the above accounts, the 2nd WCCS is promoting internationally the improvement and promotion of safety cultures for medical service & practice, pharmacology, infectious disease, etc. The 2nd WCCS will be held in Heidelberg, Germany in response to many requests to exchange knowledge and experiences with our international experts in risk and emergency management. We are inviting experts from Germany, other European countries, North America plus those from several international organizations. The 2nd WCCS will also host many delegates from Europe, US, Canada, Australia, Asia, Africa, and the Middle East. It is expected that lessons from German risk world will contribute to the improvement of safety cultures in healthcare around the world
